R Reference Card for Data Mining

by Yanchang Zhao, yanchangzhao@gmail.com, February 28, 2012
The latest version is available at http://www.RDataMining.com. Click the link also for document *R and Data Mining: Examples and Case Studies*. The package names are in parentheses.

Association Rules & Frequent Itemsets

APRIORI Algorithm

a level-wise, breadth-first algorithm which counts transactions to find frequent itemsets

apriori() mine associations with APRIORI algorithm (*arules*)

ECLAT Algorithm

employs equivalence classes, depth-first search and set intersection instead of counting

eclat() mine frequent itemsets with the Eclat algorithm (*arules*)

Packages

arules mine frequent itemsets, maximal frequent itemsets, closed frequent itemsets and association rules. It includes two algorithms, Apriori and Eclat.

arulesViz visualizing association rules

Sequential Patterns

Functions

cspade() mining frequent sequential patterns with the cSPADE algorithm (*arulesSequences*)

seqefsub() searching for frequent subsequences (*TraMineR*)

Packages

arulesSequences add-on for *arules* to handle and mine frequent sequences

TraMineR mining, describing and visualizing sequences of states or events

Classification & Prediction

Decision Trees

ctree() conditional inference trees, recursive partitioning for continuous, censored, ordered, nominal and multivariate response variables in a conditional inference framework (*party*)

rpart() recursive partitioning and regression trees (*rpart*)

mob() model-based recursive partitioning, yielding a tree with fitted models associated with each terminal node (*party*)

Random Forest

cforest() random forest and bagging ensemble (*party*)

randomForest() random forest (*randomForest*)

Packages

rpart recursive partitioning and regression trees

party recursive partitioning

randomForest classification and regression based on a forest of trees using random inputs

rpartOrdinal ordinal classification trees, deriving a classification tree when the response to be predicted is ordinal

rpart.plot plots rpart models with an enhanced version of plot.rpart in the *rpart* package

Regression

Functions

lm() linear regression

glm() generalized linear regression

nls() non-linear regression

predict() predict with models

residuals() residuals, the difference between observed values and fitted values

gls() fit a linear model using generalized least squares (*nlme*)

gnls() fit a nonlinear model using generalized least squares (*nlme*)

Packages

nlme linear and nonlinear mixed effects models

Clustering

Partitioning based Clustering

partition the data into k groups first and then try to improve the quality of clustering by moving objects from one group to another

kmeans() perform k-means clustering on a data matrix

pam() the Partitioning Around Medoids (PAM) clustering method (*cluster*)

kmeansCBI() interface function for clustering methods (*fpc*)

kmeansruns() call kmeans for the k-means clustering method and includes estimation of the number of clusters and finding an optimal solution from several starting points (*fpc*)

cluster.optimal() search for the optimal k-clustering of the dataset (*bayesclust*)

pamk() the Partitioning Around Medoids (PAM) clustering method with estimation of number of clusters (*fpc*)

clara() Clustering Large Applications (*cluster*)

fanny(x,k,...) compute a fuzzy clustering of the data into k clusters (*cluster*)

kcca() k-centroids clustering (*flexclust*)

ccfkms() clustering with Conjugate Convex Functions

apcluster() affinity propagation clustering for a given similarity matrix (*apcluster*)

apclusterK() affinity propagation clustering to get K clusters (*apcluster*)

cclust() Convex Clustering, incl. k-means and two other clustering algorithms (*cclust*)

KMeansSparseCluster() sparse k-means clustering (*sparcl*)

tclust(x,k,alpha,...) trimmed k-means with which a proportion alpha of observations may be trimmed (*tclust*)

Hierarchical Clustering

a hierarchical decomposition of data in either bottom-up (agglomerative) or top-down (divisive) way

hclust(d, method, ...) hierarchical cluster analysis on a set of dissimilarities d using the method for agglomeration

pvclust() hierarchical clustering with p-values via multi-scale bootstrap resampling (*pvclust*)

agnes() agglomerative hierarchical clustering (*cluster*)

diana() divisive hierarchical clustering (*cluster*)

mona() divisive hierarchical clustering of a dataset with binary variables only (*cluster*)

rockCluster() cluster a data matrix using the Rock algorithm (*cba*)

proximus() cluster the rows of a logical matrix using the Proximus algorithm (*cba*)

isopam() Isopam clustering algorithm (*isopam*)

LLAhclust() hierarchical clustering based on likelihood linkage analysis (*LLAhclust*)

flashClust() optimal hierarchical clustering (*flashClust*)

fastcluster() fast hierarchical clustering (*fastcluster*)

cutreeDynamic(), cutreeHybrid() detection of clusters in hierarchical clustering dendrograms (*dynamicTreeCut*)

HierarchicalSparseCluster() hierarchical sparse clustering (*sparcl*)

Model based Clustering

Mclust() model-based clustering (*mclust*)

HDDC() a model-based method for high dimensional data clustering (*HDclassif*)

fixmahal() Mahalanobis Fixed Point Clustering (*fpc*)

fixreg() Regression Fixed Point Clustering (*fpc*)

mergenormals() clustering by merging Gaussian mixture components (*fpc*)

Density based Clustering

generate clusters by connecting dense regions

dbscan(data,eps,MinPts,...) generate a density based clustering of arbitrary shapes, with neighborhood radius set as eps and density threshold as MinPts (*fpc*)

pdfCluster() clustering via kernel density estimation (*pdfCluster*)

Other Clustering Techniques

mixer() random graph clustering (*mixer*)

nncluster() fast clustering with restarted minimum spanning tree (*nnclust*)

orclus() ORCLUS subspace clustering (*orclus*)

Plotting Clustering Solutions

plotcluster() visualisation of a clustering or grouping in data (*fpc*)

plot.hclust() plot clusters (*fpc*)

plot.agnes(), plot.diana(), plot.mona(), plot.partition() plot clusters (*cluster*)

bannerplot() a horizontal barplot visualizing a hierarchical clustering (*cluster*)

Cluster Validation

silhouette() compute or extract silhouette information (*cluster*)

cluster.stats() compute several cluster validity statistics from a clustering and a dissimilarity matrix (*fpc*)

clValid() calculate validation measures for a given set of clustering algorithms and number of clusters (*clValid*)

clustIndex() calculate the values of several clustering indexes, which can be independently used to determine the number of clusters existing in a data set

Packages

cluster cluster analysis

fpc various methods for clustering and cluster validation

mclust model-based clustering and normal mixture modeling

pvclust hierarchical clustering with p-values

apcluster Affinity Propagation Clustering

cclust Convex Clustering methods, including k-means algorithm, On-line Update algorithm and Neural Gas algorithm and calculation of indexes

for finding the number of clusters in a data set
cba Clustering for Business Analytics, including clustering techniques such as Proximus and Rock
bclust Bayesian clustering using spike-and-slab hierarchical model, suitable for clustering high-dimensional data
biclust algorithms to find bi-clusters in two-dimensional data
clue cluster ensembles
clues clustering method based on local shrinking
clValid validation of clustering results
clv cluster validation techniques, contains popular internal and external cluster validation methods for outputs produced by package *cluster*
clustTool GUI for clustering data with spatial information
bayesclust tests/searches for significant clusters in genetic data
clustvarsel variable selection for model-based clustering
clustsig significant cluster analysis, tests to see which (if any) clusters are statistically different
clusterfly explore clustering interactively
clusterSim search for optimal clustering procedure for a data set
clusterGeneration random cluster generation
clusterCons calculate the consensus clustering result from re-sampled clustering experiments with the option of using multiple algorithms and parameter
gcExplorer graphical cluster explorer
hybridHclust hybrid hierarchical clustering via mutual clusters
Modalclust hierarchical modal Clustering
iCluster integrative clustering of multiple genomic data types
EMCC evolutionary Monte Carlo (EMC) methods for clustering
rEMM extensible Markov Model (EMM) for data stream clustering
SGCS Spatial Graph based Clustering Summaries for spatial point patterns

Outlier Detection

Functions

`boxplot.stats()$out` list data points lying beyond the extremes of the whiskers
`lofactor()` calculate local outlier factors using the LOF algorithm (*DMwR* or *dprep*)
`lof()` a parallel implementation of the LOF algorithm (*Rlof*)

Packages

extremevalues detect extreme values in one-dimensional data
mvoutlier multivariate outlier detection based on robust methods
outliers some tests commonly used for identifying outliers
Rlof a parallel implementation of the LOF algorithm

Time Series Analysis

Construction & Plot

`ts()` create time-series objects (*stats*)
`plot.ts()` plot time-series objects (*stats*)
`smoothts()` time series smoothing (*ast*)
`sfilter()` remove seasonal fluctuation using moving average (*ast*)

Decomposition

`decomp()` time series decomposition by square-root filter (*timsac*)
`decompose()` classical seasonal decomposition by moving averages (*stats*)
`stl()` seasonal decomposition of time series by `loess` (*stats*)
`tsr()` time series decomposition (*ast*)
`ardec()` time series autoregressive decomposition (*ArDec*)

Forecasting

`arima()` fit an ARIMA model to a univariate time series (*stats*)
`predict.Arima` forecast from models fitted by `arima` (*stats*)

Packages

timsac time series analysis and control program
ast time series analysis
ArDec time series autoregressive-based decomposition
ares a toolbox for time series analyses using generalized additive models
dse tools for multivariate, linear, time-invariant, time series models
forecast displaying and analysing univariate time series forecasts

Text Mining

Functions

`Corpus()` build a corpus, which is a collection of text documents (*tm*)
`tm_map()` transform text documents, e.g., stemming, stopword removal (*tm*)
`tm_filter()` filtering out documents (*tm*)
`TermDocumentMatrix()`, `DocumentTermMatrix()` construct a term-document matrix or a document-term matrix (*tm*)
`Dictionary()` construct a dictionary from a character vector or a term-document matrix (*tm*)
`findAssocs()` find associations in a term-document matrix (*tm*)
`findFreqTerms()` find frequent terms in a term-document matrix (*tm*)
`stemDocument()` stem words in a text document (*tm*)
`stemCompletion()` complete stemmed words (*tm*)
`termFreq()` generate a term frequency vector from a text document (*tm*)
`stopwords(language)` return stopwords in different languages (*tm*)
`removeNumbers()`, `removePunctuation()`, `removeWords()` remove numbers, punctuation marks, or a set of words from a text document (*tm*)
`removeSparseTerms()` remove sparse terms from a term-document matrix (*tm*)
`textcat()` n-gram based text categorization (*textcat*)
`SnowballStemmer()` Snowball word stemmers (*Snowball*)

Packages

tm a framework for text mining applications
tm.plugin.dc a plug-in for package *tm* to support distributed text mining
tm.plugin.mail a plug-in for package *tm* to handle mail
RcmdrPlugin.TextMining GUI for demonstration of text mining concepts and *tm* package
textir a suite of tools for inference about text documents and associated sentiment
tau utilities for text analysis
textcat n-gram based text categorization
YjdnJlp Japanese text analysis by Yahoo! Japan Developer Network

Social Network Analysis

Functions

Packages

egonet ego-centric measures in social network analysis
sna social network analysis
snort social network-analysis on relational tables
igraph network analysis and visualization
bipartite visualising bipartite networks and calculating some (ecological) indices
blockmodeling generalized and classical blockmodeling of valued networks
diagram visualising simple graphs (networks), plotting flow diagrams
NetCluster clustering for networks
NetData network data for McFarland's SNA R labs
NetIndices estimating network indices, including trophic structure of food-webs in R
NetworkAnalysis statistical inference on populations of weighted or unweighted networks
tnet analysis of weighted, two-mode, and longitudinal networks
triads triad census for networks

Spatial Data Analysis

Functions

Packages

spdep spatial dependence: weighting schemes, statistics and models

Statistics

Summarization

`summary()` summarize data
`describe()` concise statistical description of data (*Hmisc*)
`boxplot.stats()` box plot statistics

Analysis of Variance

`aov()` fit an analysis of variance model (*stats*)
`anova()` compute analysis of variance (or deviance) tables for one or more fitted model objects (*stats*)

Statistical Test

`t.test()` student's t-test (*stats*)
`prop.test()` test of equal or given proportions (*stats*)
`binom.test()` exact binomial test (*stats*)

Mixed Effects Models

`lme()` fit a linear mixed-effects model (*nlme*)
`nlme()` fit a nonlinear mixed-effects model (*nlme*)

Principal Components and Factor Analysis

`princomp()` principal components analysis (*stats*)
`prcomp()` principal components analysis (*stats*)

Other Functions

`var()`, `cov()`, `cor()` variance, covariance, and correlation (*stats*)
`density()` compute kernel density estimates (*stats*)

Packages

nlme linear and nonlinear mixed effects models

Graphics

Functions

`plot()` generic function for plotting (*graphics*)
`barplot()`, `pie()`, `hist()` bar chart, pie chart and histogram (*graphics*)
`boxplot()` box-and-whisker plot (*graphics*)
`stripchart()` one dimensional scatter plot (*graphics*)
`dotchart()` Cleveland dot plot (*graphics*)
`qqnorm()`, `qqplot()`, `qqline()` QQ (quantile-quantile) plot (*stats*)
`coplot()` conditioning plot (*graphics*)
`splom()` conditional scatter plot matrices (*lattice*)
`pairs()` a matrix of scatterplots (*graphics*)
`cpairs()` enhanced scatterplot matrix (*gclus*)
`parcoord()` parallel coordinate plot (*MASS*)

`cparcoord()` enhanced parallel coordinate plot (*gclus*)
`paracoor()` parallel coordinates plot (*denpro*)
`parallel()` parallel coordinates plot (*lattice*)
`densityplot()` kernel density plot (*lattice*)
`contour(), filled.contour()` contour plot (*graphics*)
`levelplot(), contourplot()` level plots and contour plots (*lattice*)
`sunflowerplot()` a sunflower scatter plot (*graphics*)
`assocplot()` association plot (*graphics*)
`mosaicplot()` mosaic plot (*graphics*)
`matplot()` plot the columns of one matrix against the columns of another (*graphics*)
`fourfoldplot()` a fourfold display of a $2 \times 2 \times k$ contingency table (*graphics*)
`persp()` perspective plots of surfaces over the xy plane (*graphics*)
`cloud(), wireframe()` 3d scatter plots and surfaces (*lattice*)
`interaction.plot()` two-way interaction plot (*stats*)
`iplot(), ihist(), ibar(), ipcp()` interactive scatter plot, histogram, bar plot, and parallel coordinates plot (*iplots*)
`pdf(), postscript(), win.metafile(), jpeg(), bmp(), png(), tiff()` save graphs into files of various formats

Packages

lattice a powerful high-level data visualization system, with an emphasis on multivariate data
ggplot2 an implementation of the Grammar of Graphics
vcd visualizing categorical data
denpro visualization of multivariate, functions, sets, and data
iplots interactive graphics
googleVis an interface between R and the Google Visualisation API to create interactive charts

Data Manipulation

Functions

`scale()` scaling and centering of matrix-like objects
`t()` matrix transpose
`aperm()` array transpose
`sample()` sampling
`table(), tabulate(), xtabs()` cross tabulation (*stats*)
`stack(), unstack()` stacking vectors
`reshape()` reshape a data frame between "wide" format and "long" format (*stats*)
`merge()` merge two data frames
`aggregate()` compute summary statistics of data subsets (*stats*)
`by()` apply a function to a data frame split by factors
`tapply()` apply a function to each cell of a ragged array
`melt(), cast()` melt and then cast data into the reshaped or aggregated form you want (*reshape*)
`na.fail, na.omit, na.exclude, na.pass` handle missing values

Packages

reshape flexibly restructure and aggregate data

Data Access

Functions

`save(), load()` save and load R data objects
`read.csv(), write.csv()` import from and export to .CSV files
`read.table(), write.table(), scan(), write()` read and write data
`write.matrix()` write a matrix or data frame (*MASS*)
`sqlQuery()` submit an SQL query to an ODBC database (*RODBC*)
`odbcConnect(), odbcClose()` open/close connections to ODBC databases (*RODBC*)
`dbSendQuery` execute an SQL statement on a given database connection (*DBI*)
`dbConnect(), dbDisconnect()` create/close a connection to a DBMS (*DBI*)

Packages

RODBC ODBC database access
DBI a database interface (DBI) between R and relational DBMS
RMySQL interface to the MySQL database
RJDBC access to databases through the JDBC interface
ROracle Oracle database interface (DBI) driver
RpgSQL DBI/RJDBC interface to PostgreSQL database
RODM interface to Oracle Data Mining
xlsReadWrite read and write Excel files
WriteXLS create Excel 2003 (XLS) files from data frames

Generating Reports

`Sweave()` mixing text and R/S code for automatic report generation (*utils*)
R2HTML making HTML reports
R2PPT generating Microsoft PowerPoint presentations

Interface to Weka

Package ***RWeka*** is an R interface to Weka, and enables to use the following Weka functions in R.

Association rules:
`Apriori(), Tertius()`
Regression and classification:
`LinearRegression(), Logistic(), SMO()`
Lazy classifiers:
`IBk(), LBR()`
Meta classifiers:
`AdaBoostM1(), Bagging(), LogitBoost(), MultiBoostAB(), Stacking(), CostSensitiveClassifier()`
Rule classifiers:
`JRip(), M5Rules(), OneR(), PART()`
Regression and classification trees:
`J48(), LMT(), M5P(), DecisionStump()`
Clustering:
`Cobweb(), FarthestFirst(), SimpleKMeans(), XMeans(), DBScan()`
Filters:
`Normalize(), Discretize()`
Word stemmers:
`IteratedLovinsStemmer(), LovinsStemmer()`
Tokenizers:
`AlphabeticTokenizer(), NGramTokenizer(), WordTokenizer()`

Editors/GUIs

Tinn-R a free GUI for R language and environment
RStudio a free integrated development environment (IDE) for R
rattle graphical user interface for data mining in R
Rpad workbook-style, web-based interface to R
RPMG graphical user interface (GUI) for interactive R analysis sessions
